

Tire Mark Remover

DESCRIPTION

TIRE MARK REMOVER is a blend of special cleaning agents, surfactants and terpene solvents. It is a specially formulated cleaner designed to remove rubber skid marks from epoxy or other polymer-type floor systems without harming the floor's surface. It also works great on steel trowelled concrete floors.

Unlike other cleaners tough enough to take up rubber tire marks, it contains no petroleum solvents, making it safer to use and safe on polymer floors.

USAGE

As a spot cleaner on rubber tire marks: Dilute 1 to 1 with water. Apply solution to tire mark with a spray bottle. Allow the solution to soften the tire mark for at least 15 minutes. Then scrub vigorously with a stiff bristled deck brush or an electric floor scrubbing machine with a 3M "RED or BLUE" pad. It is very important that you do not rush the scrubbing procedure.

Thorough rinsing is mandatory. If drains are available, hosing material with hot water is best. If no drains are available, use a high quality water-type vacuum to remove rinse water.

PACKAGING

TIRE MARK REMOVER is available in 1 gallon cans and 5 gallon pails.

CAUTION

Irritant. If swallowed, do not induce vomiting. Drink large amounts of water, milk, or juices. Call a Physician. If splashed on eyes or skin, immediately flush area with clean water for a minimum of 15 minutes. Rubber gloves and eye protection should be worn during application.

Before using any DUR-A-FLEX, Inc. Product, be sure the Material Safety Data Sheet is read and understood.
